EDUCATION

Indian Institute of Information Technology Ranchi

Bachelor of Technology in Computer Science and Engineering

Dec 2021 – May 2025

CGPA: 8.48

EXPERIENCE

Software Engineer

CallHub (Gaglers)

February 2025– Present

Bengaluru, Karnataka

- Built and maintained scalable microservice-based web applications leveraging **React.js**, and **Django RESTful APIs**, deploying via **AWS** and **Docker** to support distributed, **cloud-native architectures** and enhance cross-domain scalability.
- Optimized database performance** using efficient SQL queries and contributed to **CI/CD pipelines** and automated testing, improving deployment efficiency and reducing production issues
- Integrated **GenAI features** and collaborated with cross-functional teams to build, debug, and **deploy scalable, reliable systems**, supported by automated testing and deployment pipelines.

Software Engineer Intern

Ericsson

May 2024 – September 2024

Bengaluru, Karnataka

- Automated processes for 5G network management using **Java**, reducing routine task processing time by **90%**, thereby enhancing operational efficiency.
- Worked on a zero-touch network management system, increasing team productivity by **25%** through streamlined workflows.
- Leveraged data-driven approaches to identify and resolve critical issues, achieving a **95%** success rate in troubleshooting and minimizing downtime by **40%**

PROJECTS

HealthVault | *React.js, Express.js, Redux, TailwindCSS, MongoDB, REST APIs*

Jan 2025 – Present

- Developed an **e-health monitoring system** facilitating real-time **patient management** and **role-based access control** for doctors, and patients.
- Integrated advanced **calendar scheduling and appointment booking features**, improving healthcare efficiency by **30% in task automation**.
- Designed and implemented a responsive **dashboard** for streamlined user experience, enhancing **data visualization by 40%** with real-time stats and analytics.
- GitHub Repo

Wallet-wiz | *React.js, Redux, Express.js, Node.js, MongoDB, REST APIs, Vercel, Render*

Jul 2024 – Aug 2024

- Created and deployed a secure platform enabling users to **send, receive, and request payments** with 100% accuracy, managing transactions through unique IDs and reducing errors by 50%.
- Optimized state management by 40% through the integration of Redux, and increased user engagement by 30% by implementing **Nodemailer** for real-time email notifications, leading to a more interactive user experience.
- Live Application

SKILLS

Programming Languages: Java, Python, SQL

Frameworks/ Libraries: React.js, Elasticsearch, Django, REST APIs, Redux

Databases: PostgreSQL, DynamoDB

Cloud and Devops: AWS, S3, Docker, Kafka, Redis

Technical Skills: OOPs, RDBMS, Distributed Systems, Query Optimization, Data Structures and Algorithms, Operating Systems

ACHIEVEMENTS

LeetCode: Solved over 500 questions, Highest Contest Rating: 1672

Shortlisted Myntra WeForShe Hackathon: Selected amongst the top 8% of the teams at the Ideation Round

Secured top 400, Google Girl Hackathon: Cleared first round, selected among the top 400 participants out of 26,000 (Top 1.5 percent)
